\* Access the network to control through App and Bluetooth

\* With the constant power program design, brightness remains the same during color temperature adjustments. Drivers can be connected with the load twice the rated power. 20W drivers can be connected with the load of 20W × 2CH. The total power of both channels keeps within 20W.

## Push DIM/CT

Reset switch

- On/off control: Short press .
  - Stepless dimming: Long press.
  - With every other long press, the brightness level goes to the opposite direction.
  - Dimming memory: Go to the brightness level adjusted previously when lights are turned on.
- \* Push DIM works when the driver didn't be paired up with a remote or gateway.  
If it did, please remove the paired driver from the remote or gateway.

## Other Instructions

If the driver works with a remote, gateway ,intelligent wireless switch or other items ,please refer to related manuals.

## App Operating Instructions

### 1. Register an account

Scan the QR code below with you mobile phone and follow the prompts to complete the app installation.

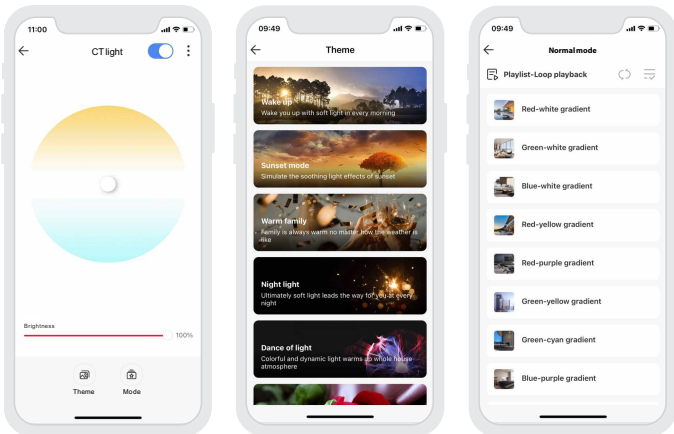

Scan and download the App

### 1.2 Open the App and log in or register an account.

### 3. Control interface settings

After pairing up your device, go to the control interface. You'll be able to achieve your desired lighting effects by changing brightness, colors and color temperature. Click "Theme" and you'll easily switch to multiple theme lighting effects with one tap. Click "Mode" and the App provides you editable advanced modes. Customize dynamic modes to put you into a more colorful life.

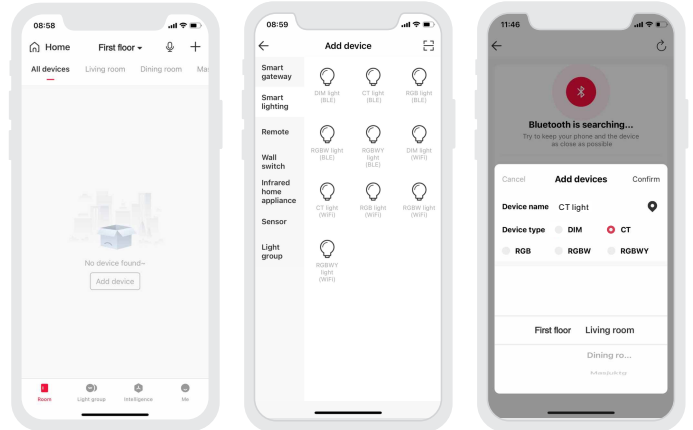

### 5. Advanced functions

The driver can be linked up with gateway function devices (such as LTECH Super Panel) to achieve the advanced functions from cloud scenes to automation.

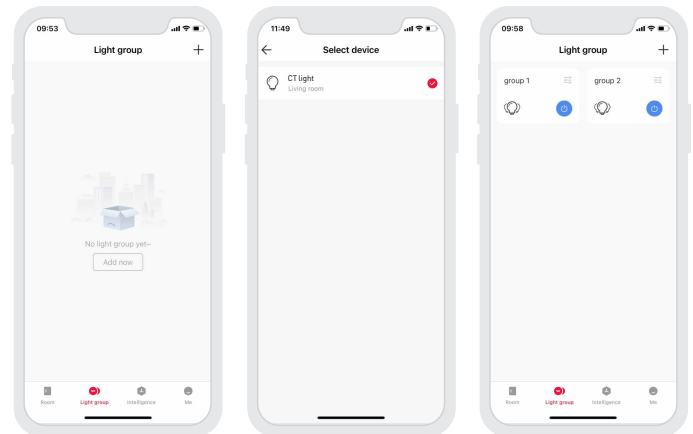

### 2. Control interface settings

Create a home if you are a new user. Click "+" icon in the upper right corner and access the "Add Device" list. Pick "Smart lighting -CT light (BLE)" from the list and select the light fixture type you want to add. Follow the prompts on the App. Power on the device firstly, and make sure the device is not connected to network. Then click "Bluetooth Search" and follow the prompts to add the device.

### 4. Light groups

Users are able to combine the same type of light fixtures into a group to control them simultaneously. Once you create the group, you can set the dim level or change color temperature more easily. Switch to "Group" menu and click "+" icon in the upper right corner. Follow the prompts to rename the group and click "Next" to pick the lights you are going to group together and to save them.

### Reset The Device (Reset to factory defaults)

Make sure the driver is well-connected to a lamp and the lamp is on, turn it off with the switch and after 15 s turn it on. After 2s, turn it off again. Repeat the same operation 6 times. When the indicator light flashes 5 times, reset the device to factory defaults successfully.
